There are plug-ins which add AutoCAD functionality such as dynamic objects and certain layers as seen on the screen. To allow customization of AutoCAD features, AutoCAD provides a programming interface to AutoLISP, Visual LISP, and VBA. Some AutoCAD add-on products create their own drawing architecture: Microsoft Excel is able to display AutoCAD DWG or DXF drawings, and can import them to it. To be able to import AutoCAD files, Excel must be run in a Windows operating system. However, using File → Open and locating an AutoCAD drawing, can import a drawing without the user needing to set up a drawing manager. This is a major advantage over the Microsoft Office Drawing System, which does not support drawing import. AutoCAD does not directly support Microsoft Excel, but through the use of a custom-written drawing manager, many AutoCAD objects can be accessed and manipulated by Excel functions. Microsoft Excel can read and manipulate many AutoCAD formats such as DXF, DWG, and DGN. Files can be modified using formulas, macros, or functions. Such functions include among others, the ability to perform area calculations. Functions can be made dependent on cells, and spreadsheet cells can be linked to properties and attributes in a drawing. Because of the need to interpret custom formats, the program may not display the latest AutoCAD file formats. Microsoft Excel can import the drawing, but it will show a version of the drawing up to a certain point in the past. To see the latest files, use AutoCAD's Direct Exporting function, and export the drawing to a DXF file, which is then imported by Excel. AutoCAD's "Drawing Manager" capability is sometimes referred to as "Mastering" or "Masterdraw". It allows Excel to open DWG files, modify their appearance and display them on screen. AutoCAD's drawing manager also allows the user to save changed drawings in the native file format, as well as export them to the native file format. Microsoft Access can view AutoCAD drawings. To export drawings into Access, the user needs to use the Access Data Management. In this step the user must follow the general rules of using Access for transferring data: "Copy Data" and "Paste Data". Access then imports the drawing into a table in Microsoft Access. These drawings can be exported to DWG 5b5f913d15
