2. **Free Natural Light** The **Free Natural Light** preset creates a kind of halo effect to the highlights in an image. It does this by creating a separate layer of light that offsets the highlights by the same amount (relative to the dark areas) that the highlight color is offset from the mid-tones. When you have used the Free Natural Light preset, you may want to go back and manually select some of the edges of the light pixels. For some images, adding a `_selective highlight mask_` may improve the look of the highlights. 3. **Blur, Colorize, and Replicate** In the **Blur, Colorize, and Replicate** preset, the program applies a slight blur to the image. It can also change the color of the image. The **Blur, Colorize, and Replicate** preset gives you the ability to either blur and change the color of the image or colorize and blur the image together. 4. **Randomize, Content-Aware, and Heal** These three presets work in a similar way to the **Blur, Colorize, and Replicate** preset: they apply a slight blur, change the color of the image, and change the colors in some way (i.e., as in the Randomize preset). The **Randomize** preset uses a `_randomize layer mask_` in which each pixel is slightly blurred. The color of the selected areas is changed by using the adjustment layers. The **Content-Aware** preset first finds and separates the main subject from the background. Then, the program searches for similar colors in the background and subtracts them. The colors that it finds in the background are changed to resemble the colors of the main subject. The **Heal** preset uses the same core principle of finding similar color values in the background and changing them to make the main subject stand out. In order to use all of these presets, you need to be familiar with Lightroom's Edit In settings. After you've applied a preset, use the Adjustment layer to remove the mask and keep it. To add a new preset, first make sure that the Adjustment layer has been removed, and then go to Layer > New > Adjustment Layer. You can choose from an existing preset or create a new one. # **Mastering Lightroom's Blur Presets** The Lightroom Blur filters

The editing techniques, tools and effects available to designers are similar. Although, many users of the two programs cannot tell the difference because of the similarity in appearance. Editor's note: This guide was originally published in June, 2016. Since then, Adobe has introduced InDesign, a streamlined successor to Adobe Illustrator. In this article, we're comparing the two topmost graphics editors: Photoshop and Photoshop Elements, which have been around for a long time. This article will cover any differences between Photoshop and Photoshop Elements along with some handy Photoshop tips. What's the difference between Photoshop and Photoshop Elements? Both Photoshop and Photoshop Elements are graphics editors. They were developed by the same company: Adobe. Adobe Photoshop is the professional graphics editor. Adobe Photoshop Elements is the entry-level graphics editor. Unlike Photoshop, the interface of Photoshop Elements is based on a magazine style. It consists of modules with dropdown lists and text boxes to make the editing tasks even easier. If you want to go fast, you can simply open a picture and edit it with the touch of a button. The editing module in Elements contains similar tools and effects as Photoshop. Photoshop Elements has fewer features and is not as complex as Photoshop. However, if you aren't an advanced user, Photoshop Elements will be enough for you. Wednesday, August 3, 2011 Influence The influence of religion is huge in my life. I see Christmas as a spiritual holiday, although I am not religious. It is also a religious holiday for most of my family. When my Dad was dying of cancer and could not eat or drink, we had Christmas Eve mass. Every year that is one of the highlights of my life. When my Dad died, his funeral was a Catholic funeral. It is ironic that when I was a young girl, I hated Christmas. I still don't celebrate it - don't care for egg nog or getting in any kind of gear. Most people I know still believe that the holiday is about putting up with a long cold winter. So when we moved in next to my parents, they changed our whole attitude about the holiday. The first thing my mom did was change the entire house for the holiday. She removed all of the pine tree decorations except for one big one in the corner of the living room that showed a Santa she had done. I didn't like that. I protested the tree going up until she told me it was going to be taken down after the holidays. I complied - I liked it better that way. Then she put up paper decorations. I hated the lights on the tree, but I tolerated them for my own reasons. For one, we had no batteries. So I assumed that was just like a fire. I remember looking at the tree one morning and there was not a single bare branch or waxy leaf. The tree looked lush and full, even though there was almost no tinsel or lights. I remember that every year that I was small was too big of a production for me. The presents were too big and the tree was too wonderful. It really got to me, too. I turned into a baby at Christmas. I probably still have the picture where I cried and clutched my mom's finger. As I got older, I started to understand a little better why it was like it was. My dad was an extremely private person, and he liked to keep his family private, as well. He didn't want us to feel pressured or pressured to have a happy holiday. He wanted us to have a day of peace and happiness for being together, but not one in which we were forced to celebrate. He was allergic to the stress. My parents didn't make any big deals about it either. Every year, they would light two candles on the

David Binno leads 5th AC Green Event Chris Berger, Kristen Green, Staci Hardy, Miali Kawaya Monday, August 28, 2011 Marketing professionals from across the country gathered over the weekend for the Association of Independent Commercial Photographers 2017 conference in Tucson, Ariz., under the name AC Green. Attendees mingled in networking events, shared stories at panels, and explored new sites and venues. The region's three-day conference was co-branded with the Cimarron Arts Foundation, which also hosted the conference in New York City in 2009, and the Mayo Clinic in Phoenix. Along with networking, the Tucson event hosted a large photography exhibition at the Tucson Convention Center and the completion of the second annual Tucson Rendez-Vous Photography Exhibition, both with the Cimarron Arts Foundation. Imagine I have some field on a class that has a null reference on the object itself. Can I know when I access this object if it's null or undefined or not? Object.prototype.foo = 'bar'; var obj = {foo: null}; alert(obj.foo) If obj.foo is null, I want it to return undefined on the object so that in the alert box it shows up as bar, if not it returns null. A: You can add a getter and setter to the prototype of the constructor. This will overwrite the reference and all the methods on the instance will run the getter/setter: var obj = {foo: null}; Object.defineProperty(obj, 'foo', { get(){ return this._foo; }, set(foo){ this._foo = foo; } }) alert(obj.foo) // -or- alert(obj._foo) Q: What's the difference between $(M \times N)^{[M]} \times N^{\{N\}}$ and $(M \times N)^{[M]} \times N^{\{N\}}$?
