A: I would say that if you are just getting started with virtualization then giving VMware ESXi a try is best for you. It is free and the best platform to work with. There are other products out there as well. QEMU is another one but it is a little out of my experience zone but there are other free ones out there. ABSTRACT In the past year, we have developed new approaches to the dissection of protein folding and misfolding and the manifestation of disease, allowing for discoveries that up until now were at least partially intractable. Recent advances in cryo-electron microscopy (cryo-EM) have led to considerable advances in protein crystal structure determination by an entirely different approach that gives access to membrane proteins, allowing the entire topology of proteins not crystallizable to be resolved. This includes the resolution of proteins in their native conformation, in complex with ligands, in different assemblies in stoichiometric relationships, and during unfolded states of such assemblies. These advances in cryo-EM have started to yield new insights into general principles of protein folding and assembly. We have developed strategies to circumvent some of the barriers that hampers progress in such studies, and gained access to structures on which we have initiated novel investigations on the relationship between protein folding, structure and function. In this way, we have been able to address questions of general importance, or more specific questions related to protein-protein interactions within multi-protein complexes. Several promising leads on proteins associated with human disease have emerged. For example, the P2X7 receptor, associated with neurodegenerative diseases (including Alzheimer's disease), has a unique inverted topology in which the channel pore is located at the top of the membrane and the binding site for ligands is at the bottom of the protein. By applying exciting new approaches and strategies developed in our lab in collaboration with a number of other investigators, we have been able to engineer the production of proteins with these novel topologies. Because these proteins are normally expressed in the cytosol they are not normally targeted to the plasma membrane. We have developed strategies that allow us to express these proteins in the plasma membrane and, importantly, in purified lipid bilayers that, for these proteins, have many of the properties of the plasma membrane itself

Protea AntiVirus Tools, Quick Heal application provides you with the Quick Heal engine-based solution for your IBM Domino server (formerly IBM Lotus Domino). This ensures extra-protection for your e-mail component, collaboration capabilities and the application platform as a whole and keeps viruses at bay in order to prevent catastrophes. With the Protea AntiVirus Tools, Quick Heal application, your email messages are automatically scanned upon arrival, thus no infected emails should pass to their receivers. The database items are also permanently scanned and either email messages as well as stored files can be deleted or quarantined. This particular piece of software notifies you whenever a new threat has been detected and every action is also stored in logs for later analysis. The main components of Protea AntiVirus Tools, Quick Heal comprise the monitor, the scanner, the updater, the configuration database as well as the quarantine store. The monitor takes care of all incoming and outgoing email messages alongside their attachments, while the scanner looks for malicious code within the NSF database stored documents. The role of the updater is self-explanatory and the antivirus package management is done through the configuration database. Suspicious and infected files are strictly kept behind bars within the quarantine store. Besides the body and the attachment of the email messages, the monitor of the Protea AntiVirus Tools, Quick Heal application also checks the attached OLE objects to provide one more protective layer to the whole system. Being the primary targets for infections, the emails are meticulously scanned and quibbled to the point where nothing is left out of the picture. All in all, the Protea AntiVirus Tools, Quick Heal software can prevent data loss within the IBM Domino server and that is what you really want from any protection you can get. While not being the best application to handle the heavy email traffic and abundant flow of database items, Protea AntiVirus Tools, Quick Heal is a trustworthy program for small and medium-sized companies.
