Synchronize It! [Win/Mac]

From time to time users encounter problem when working on their computers but are not connected to the network. They don't have access to the Internet and have no information about any changes. But are eager to know what have happened in their computers. Some programs are looking for information at the computer with a delay of days or even weeks. It is not convenient for the users and can be harmful. Solution - don't miss new packages from Synchronize It!. Synchronize It! allows to see changes from your previous version of data and keep it up to date. Changes found in your backup archive are stored locally and may be loaded to your working version using 2 options: ⏺ "Update folder" - updates the folder in your working version from the archive archive. Update will be done in real time, and will not be stored to your working version. Also, it will change the name of the backup file. ⏺ "Load all changes" - Updates the folder and saves all changes to your working version. You can load all changes by clicking "Load all changes" button. ⏺ Synchronize It! uses a "global" or "local" sync mode. If the mode is set to "local", the backup archive is created on your local computer. This mode is very convenient if you only want to keep backup. If you wish to synchronize your entire work, you can change the mode to "global", which means that the backup archive is created on a server. Using this mode you can use internet access with a delay of hours or even days. ⏺ When you start Synchronize It!, your settings are saved for your next session. If you want to see changes or archive data, you can start a "new session", by pressing the "new session" button. Your backup archive, which is created by Synchronize It!, is fully portable. You can use it on any other computer. You can also create new archive files on any computer to sync and compare your folders. Features: ⏺ Compatible with Windows 98, ME, NT 4.0, 2000, XP. 32- and 64-bit operating systems. ⏺ Symlink support (backup archive file is created as symlink) ⏺ Comparing folders with subfolders ⏺ Comparison of folders and archives ⏺ Synchronizing folders ⏺ Synchronize folders in "local" or "global"

What's New In?
