AutoLISP is an add-on language for AutoCAD. Although somewhat similar to a computer programming language, the AutoLISP language is really more of a script language. It can be used in AutoCAD or used in combination with another programming language. AutoCAD has several command-line utilities, such as cc, cc2, lsb, lsc, lsm, and lsp. The cc command allows communication between two or more applications through standard communications channels such as COM, named pipes, TCP/IP, and BICS. The lsp command allows the execution of a LSP, a language server protocol that is used to dynamically adapt the environment to the individual user. The lsc command runs a language server, a user extensible interactive toolkit designed to allow users to dynamically interact with their files and the AutoCAD environment. Autodesk introduced the .NET framework in September 2005, which allows AutoCAD developers to write extensions in C# or Visual Basic.NET. There are also a number of .NET AutoLISP plugins for AutoCAD. AutoCAD has integrated the Autodesk Exchange Apps program into AutoCAD 2007. The Exchange Apps program is an external store that provides a variety of applications and utilities that enhance AutoCAD functionality. In addition, AutoCAD has integrated the Exchange Web Applications program into AutoCAD 2009 and later. AutoCAD provides a custom scripting or application programming interface, or API. The API is used for scripting and automation in AutoCAD. The API includes a .NET library for programming. The API also includes a custom programming language, AutoLISP. Visual LISP is a visual programming language for AutoCAD. The language is an interpreted, graphical programming language designed for rapid development of macros, custom tools, and custom objects. Visual LISP can create more than 30 standard objects, macros, and custom objects. The AutoLISP language was originally based on the Visual LISP language but was developed from scratch. The AutoLISP language was originally used in AutoCAD Architecture as a scripting language. AutoLISP is similar to the BASIC programming language. It is limited in scope, rather than easy to understand, but extremely powerful. AutoLISP was originally available only in AutoCAD Architecture. It was then used in AutoCAD 2006, and then integrated into the main AutoCAD 2008 software. a1d647c40b
