Now start the Autodesk Autocad from its shortcut on your desktop, and download and install it. Open Autodesk Autocad, and then in the menu click File, in the New drawing dialog click Open. First, select the template that you want and click OK. Now you have to select all and set the color. In this example, we selected the polygon and filled with dark blue color. It's better to turn on the grid on the fly. You can create as many layers as you want. And the most important thing is to choose the type of object for each layer. It's up to you. It's better to open the file with Microsoft Excel and then, in the graphics section, save it. Now we are ready to export and convert the file. Select the file with Autodesk Autocad and then go to the File menu and select Export to PDF. Select the file where you want to save the file and then choose a location and a name. In the next window, you can choose the type of file format. The best is the pdf. Now we will save all the layers and we will save it with the same name, but in the name of the user layer. Select the file and then click Save. And then we will check the file to see if it works. The creation of the file is finished. And now, we will create it on the computer. How to use the licence The licence is a piece of information that is unique to each Autodesk product and is protected by the copyright law. The law restricts the use of this information, and therefore, is not allowed to publicly disseminate it. But we are allowed to copy it and, in that case, you can give us this piece of information and, if necessary, you can change it. If you are using the licence on an official site, Autodesk will ask you to set your licence. This is the way it looks: The licence type: If you download and install Autodesk Autocad on your computer, the licence is activated automatically, so you don't have to open a window to check it. Now you know how to download Autodesk Autocad, how to use it, and what the licence is. If you need more details, use the link above and.
