PNG (Portable Network Graphics) is a format that is designed to store a lot of different image formats in a single file, being

characterized by the ability to store a large range of colors and textures. The availability of such large quantities of pixels in a single file makes it possible to easily show objects of diverse sizes in the same file. PNG is not just a format to store graphic files, but rather a format that is compatible with almost any file type, including video, audio, and vector. The file extension of PNG is ".png". Every PNG icon can be used as a graphic image, as well as any other file type. Due to the format compatibility of PNG and the fact that it uses a single file to store a lot of different formats, you can use PNG as a way to package all the files you need in a single package that has a name that will not be hard to identify. For instance, if you have a movie that has a soundtrack of individual songs that are stored in different audio file types, you can easily use the PNG format to combine all the audio files into a single file and name it " 09e8f5149f
