Loop Recorder is a pretty basic recording tool, yet it packs in a pretty list of features. The most important of them are: - easy to use interface - useful options for quality, length, buffer, and other things - all functions are accessible through intuitive interface We don't recommend using the application for anything professional since the sound quality cannot be compared to that of dedicated programs, and there is no way to set a recording length. However, the application is useful for recording every-day life activities, especially when you don't have a lot of time on hand. There is just a few problems: file saving and editing. Saving a file works only under the "disk writer" option. Editing files is a bit of a disaster. To start editing, you have to select file in the list. And then you can't move file in the list. You can delete a selected file only. And the file is deleted at once, not after a restart of program. Review by Benow "This is an amazing program for recording sounds." Review by Manish Very good application for recording any sounds. Please consider to change the saving and editing options in the default settings. It should be as easy as that to save/edit a file. The provided software has lots of other options. I would recommend to extend the options and functions of the provided software. Review by PCS "I find it cool and awesome, especially the quality sound recording. You can get so many different effects with loop recorder. You can use filters for mastering, recording, de-reverb, etc. It's good to make your own music with loop recorder. Please update this application as soon as possible. Thanks for the good work. It would be better if it runs in 64-bit mode." Review by Alexandru "This is the most awesome recording software. I tried many of other apps. But this is really the most powerful and advance one. I use this to make many of my projects. Thanks a lot for this amazing software."
