Photoshop Elements is a freeware version of Photoshop. Elements, like most applications in the Adobe Creative Suite, is a very user-friendly program. It is easier to learn than Photoshop and is packed with tools for editing almost any kind of image. On the Mac, Photoshop comes in two different versions: Photoshop CS (for Creative Suite) and Photoshop Elements. You can get the current version from the Adobe website at `www.adobe.com`. ## Editing Photos To get started with photo editing, follow these steps: 1. \*\*Open a photo.\*\* By default, it's opened in the Photo Bin — a folder that contains a variety of JPEG and TIFF images. 2. \*\*Choose Edit\*\* ⇒ \*\*Edit In.\*\* Photos appear in a new page in the program. You can crop and remove unwanted parts of the photo if you want to use it for a specific purpose (see the next section), or you can use the Organizer to set the photo's automatic properties. ## Cropping and Straightening Photos Often, the best way to get a picture looking sharp and crisp is to crop away unwanted details. This is especially the case with landscape photos and portraits. Cropping removes those slightly blurry areas that make a photo look hazy or out of focus.

Quick and effective retouching is what Photoshop is used for, especially in high-end jobs. By knowing the right steps to follow, you can achieve any retouching that you are attempting to do. Check out the free YouTube videos from Adobe to learn how to retouch images in Photoshop. Having started to use Photoshop Elements from time to time, I wanted to figure out how to do my favorite retouching, and combine it with good animations for GIF files. One of my favorite retouching techniques is how to change an image from one subject into another, such as a dull cat to a smiling cat, or from the sky into the water. The good news is that this is just another way of changing images in Photoshop. The gist of it is that you look at an image, then look at the “Paste Special” command to the right of the file name. There you will see a few choices. To change one image into another, you can type in: “dodge”, then “burn”, then “glass”, “snow”, “desaturate” or “emboss”. Then you will have to click the “OK” button to finish the process. Tips on opening a Photoshop Elements file When you open an image file, the first thing you should look at is the file name. If it is not a neat, short and descriptive file name, you will likely have problems. A good image file name should have the following: Correct file type: .psd, .psb or .psdodg (this is a Word file extension). Full path name of the file (with an extension and the name of the file folder, if the image is in a folder). The file name and file location is important. Photoshop CS6 does not let you import images from a folder that is not in the same location as your desktop. Without the text: what is the file's location? Where can you find this file again? Copy and paste: can you open it again? If not, then how can you open it again? If you are unsure about the type of file you have, try renaming it to a .jpg file, then see if the file will open again. If you can't find the file anywhere 388ed7b0c7

Q: DB2 loads data into record when inserting into a column I have a DB2 table and I have a column named "Value" I'm doing something like this: insert into (id,value) values (,) When doing that, I get it working, but when I reload the table, it loads the records into the "value" column! Why does that happen and what is the best way to load data into "value" column? A: At a guess, you have a trigger that changes the value column after insertion. Triggers are not supported in Db2 (or any other DBMS). If you really have to have triggers, you will need to find a way to lock the table while executing the INSERT and avoid the trigger. You can read more about triggers here: Technical Field The present disclosure relates to a plasma display device that displays an image on a display panel. Background Art Conventionally, a plasma display device that displays an image on a display panel has been known. The plasma display device includes a plasma display panel (hereinafter, referred to as a PDP) and a drive circuit. For the PDP, a PDP of AC (Alternate Current)-driven display system has been generally used. In addition, the drive circuit is referred to as an AC drive circuit. The AC drive circuit has a configuration to perform discharge and to generate light corresponding to the discharge. The AC drive circuit includes a switching element and other circuit elements. Further, a power supply circuit supplies power to the AC drive circuit. For example, as one type of the power supply circuit, a fly-back converter is known that includes an inductor and a capacitor. A power conversion control IC (Integrated Circuit) includes a charge circuit, a power switch, and a drive circuit. The power conversion control IC is provided near the PDP. The charge circuit is configured to supply a power supply voltage to the drive circuit through the inductor and the capacitor. The power switch is configured to drive the inductor according to a drive signal in the drive circuit, thereby supplying power from the power supply circuit to the drive circuit. At this time, in the power conversion control IC, the charge circuit and the power switch

One of two police officers in a car involved in a single-vehicle fatal crash in Surrey was at the wheel of the vehicle at the time of the crash, the RCMP has confirmed. The crash happened at about 9:30 p.m. Sunday. The driver of the other vehicle was not hurt, said Sgt. Peter Thiessen, a RCMP spokesman in Surrey. Surrey RCMP were called to the crash, which happened on Rockland Road near 68th Street. One of the officers was taken to hospital with serious injuries. Thiessen could not specify where the other officer was. He said it was not initially clear what had happened because of the nature of the crash and the injuries. "There wasn't a lot of information coming in from the area where the collision occurred," said Thiessen. "As the daylight was starting to fade, they [RCMP] had no way of knowing where the other officer may be. "They [police] had no idea how far the other officer travelled, if he was inside the vehicle, or if he was out in the roadway. They could only assume that he was on the roadway and in some form of distress." Thiessen said the driver of the vehicle involved in the crash was later identified. The officer was also an RCMP officer, he said. "The driver

was taken out of the vehicle to be assessed for his injuries," he said. "As part of the investigation, they [RCMP] are contacting the officer who was involved in the crash." The two officers were on duty, Thiessen said. No charges have been laid, and the investigation is continuing, he said. "At this point we're looking into it as a traffic collision where two motorists were involved," said Thiessen. "The driver of the vehicle who did this, he was not a police officer at the time and [RCMP] are trying to piece together what may have happened." If charges were laid, they would be laid through the police professional standards section, he said. "We are looking at everything," he said. "It's possible the driver may be impaired. It's also possible the other officer may have been acting in the interest of their partner, and anything goes." The crash is being investigated by the Integrated Collision Investigation Team, he said. BUB1B\* plays an essential role in regulating apoptosis and
