AutoCAD is used to produce technical and commercial drawings. The term "DWG" refers to AutoCAD drawings in a specific format. As of the 2017 update, DWGs and drawings in general are offered in only two file types (F-Curve and PDF), though the DWG format has been around since the 1990s, and the company offers a trial version of AutoCAD Classic that can read F-Curve files. Autodesk has introduced many new features in recent years, such as the 2016 release of AutoCAD 2017. Some new features, such as Generate Geometry, streamline older processes. Recently, Autodesk has acquired several other CAD companies, such as D-CAD, SynchroDynamics, Vectorworks and 360, which offer more specialized CAD applications. The company still offers AutoCAD for use on PCs, but its main focus has shifted to tablets and mobile devices. AutoCAD was originally developed by Smiths Industries in Cambridge, UK in the mid-1970s. Peter Clare, an inventor of pen plotters, and Autodesk co-founder John Walker joined the company in 1977, renaming it Autodesk. Smiths Industries then became the first software company to offer a practical desktop CAD system for microcomputers. Autodesk spent most of the 1980s pushing the microcomputer market and licensing the Smiths software. From 1988 until Autodesk's IPO in 1997, Smiths Industries' shares in Autodesk were held in a UK joint venture. The 1988 version was the first of many AutoCAD releases that used the new features described below, along with the first version to use Autodesk's new internal engine. The current version, AutoCAD 2018, was first released in July 2017. The first major version, AutoCAD 2006, was released in January 1998, and the first big update, AutoCAD 2017, was released in April 2016. AutoCAD Classic AutoCAD Classic was a version of AutoCAD that ran on computers equipped with an internal or external (non-microcomputer) graphics display. Autodesk considered the Classic software to be the flagship AutoCAD product and its use for most of the 1980s. The first version of Classic was released in 1984. Classic ran on microcomputers, such as the Apple II, Macintosh, and the IBM PC compatible and included an internal graphics system. Classic also

Command-line arguments AutoCAD has a command-line interpreter. A command-line file can be created and contains the name of the command, the command arguments and the arguments themselves. The command-line interpreter allows for advanced user commands to be executed in batch mode using a shell script. AutoCAD offers a command-line utility called cleartool, part of the ClearCase version control system, which allows a user to manage a clearcase view using the command-line. The MSDN page for xrange initializes the object using the built-in constructor: xrange(start, stop[, step]) which I expected to work for an object having the properties: xrange.start xrange.stop xrange.step However, the constructor initializes it with the following arguments: xrange(start, stop, step) which I would expect to work for an object having the properties: xrange.start xrange.stop xrange.step Why are these two not the same? Am I missing something? A: You are missing the parentheses around the arguments, and also that the arguments must be evaluated first before they are passed to the constructor. >>> range(10) [0, 1, 2, 3, 4, 5, 6, 7, 8, 9] >>> range(10, 20, 2) [10, 12, 14] >>> range(10, 20, 2) Traceback (most recent call last): File "", line 1, in TypeError: 'range' object is not callable ca3fbf1094
