A perfect IP logger-barber for your PC and mobile phones! GetIP, a small freeware utility, offers you a simple, yet impressive, way to quickly retrieve your IP addresses. This is what it does: it logs all the IP addresses to an XML file, then creates a cut-off time (which you can enter manually or by clicking the "Automatic time" button) and it logs all the addresses below that time, parses them and creates a list of the IP addresses by subnet, the date and time they were logged, the country in which they were logged and the device (PC, mobile phone, etc.). You can always create your own views by clicking on "Customize View". So no matter the platform you are logged into, you will have an easy-to-read and quite entertaining list of IP addresses that you can sort by country, time, IP address, IP address subnet or device. For example, the following is what you can get through the "IP Addresses" view: IP Address - Country - Date - Time - IP Subnet - Device Example IP Address - Spain - 1st September - 01.01.2000 - 255.255.255.255 - PC Example IP Address - USA - 1st October - 01.01.2000 - 255.255.255.255 - Mobile Phone If you want to learn more about this freeware utility, you can visit the GetIP website or read the guide by using the "Help" function.
