Actual product designs, sizes, colors, and characteristics may differ somewhat. For additional information refer to the product's manual and/or consult our Customer Service department at 800.927.4205.Q: How to remove the current working directory from Hadoop arguments? I am trying to make a job with five arguments in Hadoop hadoop job -config conf/spark_2.10-1.2.0.jar -input hdfs://aa:9000/user/tandon/seg_ca/ -output hdfs://aa:9000/user/tandon/seg_ca_output/ -mapper SRC_PATH -reducer DST_PATH But the problem is "Argument input seems not well specified" How can i make it work? I have tried to add some arguments in args but i have no luck. It still can't point the input file and output file path. A: You don't need to specify the current working directory. All Hadoop jobs are executed in the current working directory, which typically is set by user. So, in your case it would be the path to the input file and output file. Delay of chemotherapy versus delayed chemoradiation for rectal cancer. A randomized study of the St. Mark's Hospital and Fox Chase Cancer Centers. The effect of adding chemotherapy to delayed radiation for locally advanced rectal cancers is unknown. Standard treatment consists of combined modality therapy (radiation plus chemotherapy) versus radiation alone. If radiotherapy could be delayed, theoretically, this would be beneficial for patients who are not able to tolerate radiation and have adjuvant chemotherapy to consider. This randomized study evaluated 595f342e71
