It lets you select an image (that you upload to your server) based on its dimensions. The installation script has been optimised to work on FreeBSD (also known as OpenBSD). The basic functionality (like image size selection) is implemented using HTML/CSS. If you select some kind of special set of images, you can create a special class for the purpose. For example, you can create a ".nibris"-class, and limit the image size selection only to images belonging to this class. Besides that, the author of the HTML/CSS will see all the HTML code and will be able to add any kind of javascript or PHP code to the This simple script is a short script that lets you select the phone number of the caller, or leave the default.Uses pop-up call to get the number. Note: Use this script only if you don't have your own caller ID software or if you want to keep your data. How to use: 1- To use the script select the submit button. 2- When the form is submitted, a pop-up window will be displayed. 3- The pop-up
