Even though Windows offers a dedicated image viewer, a dedicated .NET Image Viewer and a multitude of online resources that do all you can imagine – there are still some glitches with the handling of thumbnail libraries and images in general. That’s why I wanted to create RO-Viewer Portable. As usual I will describe most important features in this article. In my example, I will be using default images that are stored in the C:\Users\Zookink\Pictures, C:\Users\Zookink\My Music and C:\Users\Zookink\Documents folders. RO-Viewer is free for personal use. If you want to use it for commercial use, please let me know – I might be able to make it available for a fee. The license needs a non-exclusive license for the most part. I would appreciate a donation as a “Thank You”, too. You can donate by sending a small e-mail to: zookink[at]hotmail.com. I mentioned it before and I would like to repeat it – RO-Viewer is really easy to use. You just need to select an image and click the Open button. What happens next is the magic. RO-Viewer immediately shows all available information about your image, including its name, its location in a folder or its content type. By using an image editor such as Paint.NET you can modify the file – it is possible to extract some parts from the picture, replace some parts, put a new background for example. RO-Viewer will do the rest. RO-Viewer also has a convenient web browser to navigate a site in search of some relevant data. The more important features:

- File: If it is a file you want to open, just select it and click Open. RO-Viewer will open it up for you.
- Folder: If it is a folder you want to open, select it and click Open. RO-Viewer will open the folder and display all the files in that folder.
- File Properties: If it is a file you want to open, select it and click File Properties. RO-Viewer will show a full description of that file including its name, size and the date the file was modified.
- Thumbnail: If it is a thumbnail you want to select, select it and click Thumbnail. You can also drag the thumbnail to any edge of the window.
