Originally envisioned as a 3D platformer with highly-detailed graphics, combined with a musical score reminiscent of a chiptune game, Bygone Dreams has become something much more. Originally envisioned as a 3D platformer with highly-detailed graphics, combined with a musical score reminiscent of a chiptune game, Bygone Dreams has become something much more. With a distinctive art style that features silhouettes of elements from different parts of the Greek Mythology, and a storyline that incorporates the concepts of possession, shifting timelines, and "The Fall", the original game was programmed by a small band of 3 young brothers: - Thelind (Lead Artist), a.k.a. "Philos", the younger brother of the lead artist of the F-Zero series. - Yemi (Lead Programmer), the older brother of Thelind, and the youngest brother of the 2 lead artists. - Thelof (Creative Director), the middle brother of the 3. With their father, a computer engineer, having left them to work on graphic design in his free time, the group had a very artistic upbringing. While watching TV as a child, they fell in love with the music of the Mystery Science Theater 3000: The Movie and its characters, and began to make their own video creations such as a pong-simulator using a VHS tape recorder. Eventually, they all began to create their own customized music albums using a computer, alongside developing their favorite video games on the NES and SNES. This influenced their design of Bygone Dreams, which could be compared to the style of the CHILL series. The music style was quite unusual as well, due to the fact that they were not used to having so much time to record and process the tracks. This proved to be quite difficult, as they were limited to just one pair of headphones for 8-16 hours, while the music theme in the game may demand more than 15 minutes of playing. Some of the tracks were composed by great friends of the group, like the audio director of Mega Drive /Genesis games, and Thelind's good friend at SHEN Music, Mark DeVita. Other tracks were composed solely by the team as a whole. The result has been a unique and personal soundtrack that speaks to everyone. A mix of full bodied orchestral music, and sampling and experimentation from entirely new styles, Cracked Bygone Dreams Original Soundtrack With Keygen has the potential to become a classic. What's new:

In Bygone Dreams, John Innis and John Cobbs were looking for a full, six-hour film score to accompany John Innis' latest fantasy adventure film. They wanted a range of film music that would complement the soundtrack to the film, which could be used as an “isolated theme” that would become “accepted as typical of the fantasy genre." The piece consisted of a main theme, three major sections, and a minor section. This material was first processed and mixed by John Innis using a mixer and software from Focusrite known as the Heron Audio Synth. After listening to the material mixed by John Innis, John Cobbs added another element to the music by surrounding the main theme with minor elements that pulled the listener into different character-defining emotional scenes. In Bygone Dreams: Main Theme The main theme in John Innes' film is a emotive four-note melody that is played with a lot of rhythmic, tension-building dissonance. The melody begins strongly on a minor note, rose up a minor third, with rhythmic ambiguity, before resting on a complete major chord at the octave, and cadence towards the end of the measure. The melody utilizes different harmonic areas within it, such as the minor 3rd harmony and any chords in the tonic and dominant. In Bygone Dreams: Main Theme Atmospheric Suspense The first three sections of the main theme are used for the “atmospheric” scenes in Bygone Dreams. The “atmospheric suspense” section contains minor minor thirds, major thirds, and minor sixths that underline the tension as the main character approaches increasingly dangerous obstacles and faces threats with increasing impact. The tension is intensified with the use of level crossing or “mirror” chords. The a chord is subdivided into a major and minor chord, creating pseudo-intervals of a minor third in the acoustic between them. The overtones of the chord is “mirrored” down in octaves and lower, or even in a major scale, creating tension and sense of an approaching danger. In the second section, after the tension level has intensified, but before the danger is fully realized, the tension is broken by resolving the piece in the tonic and in the minor mode, with dissonant chords pulling the listener away from the tension. In Bygone Dreams: Atmospheric Suspense Third Ch
