Double click on the downloaded file to install the application on your PC. previous. In that case, a non-stop connection is set up between the current wireless terminal and the previous wireless terminal, and then a handover control signal is transmitted to the wireless base station via the transport

channel. Then, the wireless base station switches the wireless terminal from the first channel to the second channel, and transmits an allocation signal to the wireless terminal via a dedicated channel. In the step S102, since the wireless terminal maintains a connection established between the wireless terminal and the current wireless terminal, the wireless terminal cannot detect a handover indication. On the other hand, since the wireless base station sets up the dedicated channel with the wireless terminal, the wireless terminal can detect the hand
