Step 1: Select Connection Type In the start menu, select "My Computer" and go to the "Devices" tab. Select the "Connect To Device" button and search for a network device. Click the "CONNECT" button to continue with the process. When the network device is connected, you are prompted to give a username and password. This step is only required once for the login. For each session, you must give the username and password a second time in the "Settings" tab in the program. You are also prompted to change the account's security settings. You have three options: 1) select "None" to have no password. 2) select "Text Password" to type a password. 3) select "Certificate Password" to give the program a password that is automatically installed on your computer. After selecting the correct security settings, you are returned to the "Settings" tab. You must now select "OK" in each dialog to continue. The "Settings" tab now displays a list of the last device that was connected to and the password. For each device that you have connected, you must enter the password to have access to that device. You can select an option from the list by clicking the corresponding button in the list. Here is a list of the available connections: | | | | Device |
