In addition, you can preview the tracks in a built-in media player, edit tasks, as well as set the default output directory, type and file name format. Furthermore, you can enable Arial CD Ripper to overwrite existing audio tracks and to open the destination folder once the task is completed, as well as configure audio settings for each format, such as bit rate, sample frequency rate, bits per sample, encoding method and compression level. Moreover, you can configure proxy settings, change the interface skin, refresh the CD list, connect to a remote CDDDB server, select and deselect all items, and more.
