## Voxsigma Speech To Text Software Suite

# Download

the sut api is a speech recognition api which performs the speech recognition using 'sut'.

it is a speech-to-text api which helps developers to convert the voice to text in real time. it uses an api which is compatible with java se 5.0 or later. voice board is a voice recognition api and a voice translation

---

api. it provides integration of several voice recognition services to recognize voice commands from many languages, convert them to text, and answer to the user's questions through an application that is installed on the phone. it is developed using java and can be used by the developers on the android and iphone platforms.

researchers at the language technology institute of the university of amsterdam (utia) have published a paper entitled "automatic speech recognition in dutch using kaldia with a vocabulary enrichment dataset" in proceedings of the 2011 international conference on spoken language processing. the paper describes the use of the kaldia asr system for automatic speech recognition in dutch. the system achieved an accuracy of approximately 90% for some simple

---

sentences. this is roughly equal to the best system performance reported in the literature. a researcher at the university of amsterdam's language technology institute (utia) has published a paper entitled "a comparison of cepstral pitch, mel-frequency cepstral coefficients, and audio features in automatic speaker verification" in proceedings of the 18th international conference on acoustics, speech, and signal processing. in the paper, the speaker verification performance of different frequency domain features is compared. for the various feature types, an accuracy of 90% was achieved. the best performance was obtained using the mel-frequency cepstral coefficients (mfcc) features. the performance using these features was slightly better than that obtained using the

---

cepstral features (i.e. cepstral c coefficients),  
which is not surprising as the mfcc features  
have been specifically designed to represent  
speech.

## **Voxsigma Speech To Text Software Suite**

a team of researchers at the technical university of berlin, the university of edinburgh, and the university of konstanz have published a paper entitled "automatic speech recognition: a review" in the proceedings of the ieee. the paper surveys the most commonly used asr algorithms and discusses the factors that affect the accuracy of these algorithms. a team of researchers from the university of huddersfield has published a paper entitled "dynamic speech analysis and synthesis using a wavelet recursive filter" in the proceedings of the ieee. the paper describes the use of a wavelet recursive filter for speech analysis and synthesis. a team of

---

researchers at the university of huddersfield has published a paper entitled "a comparison of manual, automatic and hybrid methods for automatic speech recognition" in proceedings of the ieee. the paper describes the design and evaluation of different hybrid methods for automatic speech recognition. the paper notes that "hybrid methods are typically more accurate than either automatic or manual methods, but often require considerably more time to train and test, and there is a risk of unreliable results". a team of researchers at the university of huddersfield has published a paper entitled "a comparison of different automatic speech recognition systems for the english language" in ieee transactions on audio, speech and language processing. the paper describes the evaluation of three popular

---

open-source asr systems on the same corpus of audio data. vocapia research develops leading-edge, multilingual speech processing technologies. these technologies include large vocabulary continuous speech recognition, automatic audio segmentation, language identification, speaker recognition and audio-text synchronization. vocapia's voxsigma speech-to-text software suite delivers state-of-the-art performance in many languages for a variety of audio data types, including broadcast data, parliamentary hearings and conversational data.ventureradar research / company website 5ec8ef588b
