<http://www.netchorus.com> "the autodesk scaleform team was thrilled to submit netchorus to google," said chris maki, senior director, scaleform for unity. "netchorus is a great addition to the list of autodesk-supplied tools and an interesting example of innovation in the tools, platforms and processes over which autodesk operates. the example of netchorus shows the power of unity for non-games and the powerful tools that can come from leveraging unity with non-game content." "autodesk gave me the opportunity to get out of the studio and show them the great potential of using unity as a platform for developing large, interactive, user interfaces. netchorus is a testament to what can be achieved when you bring unity's advanced technology together with autodesk's vast suite of games development tools," said olivier pierre, founder and ceo of netchorus.

"netchorus is a perfect example of a unity application that leverages technology from autodesk's scaleform product," said dino mark iii, a member of the scaleform team. "it's a very powerful development platform that offers all the possibilities you need to develop online apps for browsers, operating systems and embedded devices. the potential for netchorus is huge." but another epidemic of fear and death is driving audiences to flinch. many of us associate aids with the popularisation of the lie that people could be wiped out without affecting the rest of the population. and that because people are mostly heteronormative, straight, men, there is no need to worry about how to make everyone aids-free. it is just men, in particular, who bear the brunt of the aids peril in countries with low hiv prevalence. that virus was written into the diagnosis of aids in 1987. the pressure to normalise everything has increased since then, leading to a greater epidemic of violence. the film centres around the murder of mitchell (tom burke), a gay man found dead in the woods. the murderer believes its only straight men who could have plotted to kill a man having sex with another man. as with all the other big epidemics, the stigma around aids has been a bad thing. it leads to "promiscuity" - the assumption that if you are gay or you have sex with someone and they do not have hiv or you have sex with someone and you both do not have hiv, then you are either stupid and "must be safer" than the person next to you, or you are deliberately spreading the virus. this means people who are gay are treated worse than they would be treated if the people involved were straight, says davies. perhaps most significantly, it leads to gay men thinking they must have hiv to be at all at risk from them. dead letter code - which won all kind of prizes at the sundance film festival this year - flips this on its head, exploring the experiences of a group of gay men at the height of the crisis. it depicts the panic of not knowing whether the man who approached you in a bar was hiv positive. were i not gay, i would have had no right to presume this man was at risk. 5ec8ef588b
