Even if you need to use a second editor (and I still use darktable), the price difference is significant compared to Pixar's new Lightwave 17. With a trial key, you can also see what works best for you. Overall, if you're serious about working with professional, raw imaging, you need Photoshop. For just $129, you can buy Photoshop Professional, and with many of the major features pre-installed, the un-boxed price is even lower than that. You can't get a better value for that kind of money. Admittedly, you'll need to be comfortable with a learning curve, but on a Mac it's easier. The same goes for Windows users, too, but the learning curve is less steep on a Windows PC. So you shouldn't be intimidated by getting started with Photoshop. Every learning curve eventually level off. Pick up a copy of Photoshop CS6 today, and you're not going to find better money on any other image editing software. It doesn't matter if you use a Mac or Windows computer, or if you add Lightroom to your workflow: Photoshop will surprise and delight you with its darkroom-like tools and its conceptual layout. First impressions with Adobe Lightroom 5.1. The new interface, annotations and smart collections are great so far. I'm trying to find out my bottlenecks. Unfortunetly, the iOS version of the app has some limitations such as the inability to change the number of images that can be processed in one batch. Also, I might want to use the scribbles feature, but I can't find a way to edit the notes of the Smart Collections.
