There are countless tutorials, videos and books that show how Photoshop works. In fact, we've this great example here on IDH. You can search for any of them on the internet. Most seem to be created by anyone who wants to create a video tutorial about a specific subject, post it on YouTube and then post it on a free service such as idh.info. Most of these videos are amateurish and very poorly done. So, where do you find good content? Where do you find content that is truly helpful and has enough merit to warrant a detailed analysis. This is where I decided to turn to the IDH. I reached out to some of the admins there and asked them to create for us some "master" articles, explaining each new feature and its uses, and any issues that we may run into during our adventures with the new Adobe software. These articles are simple tutorials (when it comes to learning), well thought through, comprehensive and laden with helpful tips. If you are serious or just getting started, they are the ones to go to. The tutorials from here make as much sense as they do clicking around, because they are laid out in a way that makes absolute sense to anyone who is familiar with the Photoshop interface. They are accompanied with screen-captures that allow you to follow along with ease. Some of the tutorials even make use of an "automate" tab, with an analyzer (automating, of course, the use of filters, curves, etc.) to automate any process. With Lightroom 5.1 which should be the version you can run on Windows PC (and Mac up until and including macOS 10.11, for details, see the article on Windows PCs and Macs), the program offers two new navigation paradigms: the Grouped view and the Collection view (also known as the Multiple view). All of its actions are also located in the Tools area.
