2 Pic is a small application that lets you perform various editing operations on two pictures at the same time. The program contains a standard interface that is not impressive in any way, but it is easy to navigate through. You can open a left and right image by using the file browser (the "drag and drop" method is not supported). So, you can apply modifications either for the left or right image - merge, overlay, horizontal or vertical line scheme, fade (horizontal, vertical, diagonal, radial, spiral), aerosol (fading, granular, granular merged, smeared; circle or square) and frames. But you can also apply effects (watery, distortion mirror, foggy, granular, color shade, mosaic, JPG quality, negative, rotate, engraving, sharpen, blur) and change the properties (adjust contrast, brightness, color saturation, illumination). In addition, you can switch colors (to another color or to the other image), add text (optionally change the font, font style, size and script), use color selection, resize images or place them side by side (horizontal or vertical orientation; adjust fading). Furthermore, you can use the "Undo" and "Redo" buttons (for each image), zoom in and out, save results in the BMP, GIF, PNG and other types of format, set file associations, and more. The program uses a low-to-moderate amount of system resources, includes a user manual and we haven't encountered any kind of problems during our tests. On the other hand, the user interface could definitely use some improvements. Also, when you make a modification to the image, you have to use the "Undo" button each time to revert changes before attempting another editing maneuver. Otherwise, the last modification will be applied to the previous one (not to the original image). All in all, 2 Pic is a very good tool for processing two images simultaneously and we strongly recommend it to all users.

KEYMACRO is a small and handy tool that was created with one thing in mind, and that's to speed up your tasks by letting you skip the tedious steps that are involved when entering a long password in a text editor or web browser. KEYMACRO lets you save that password in a file and automatically read it back when you need to use it. What's more, it also gives you the option to automatically convert passwords to the appropriate format. You don't need to worry about typing the characters in the correct order because it automatically reads them back for you. Of course, if you enter the wrong password then KEYMACRO will ask you to try again. It takes just a few moments to type in your password and to save it in the database. You can also easily import the password database from other programs, and you don't need to save the password in a .key file.

Handy Keystroke Shortcuts: It comes with two keyboard shortcuts that are applicable to text documents: **Ctrl + Alt + Arrow Left and Right:** These keyboard shortcuts let you insert new lines and paragraphs, which is very useful. **Ctrl + Alt + Down and Up:** You can use these keyboard shortcuts to jump between paragraphs and to undo the last action that you performed.

Other Features: Apart from the previously mentioned features, you can also create new passwords that you can use in all your applications. If you need to enter a password in a web browser, you can do so by right clicking on the address bar and choosing "Enter Password" from the context menu. It saves you the hassle of typing your password in a text editor or directly into the browser. Another useful feature that's included in KEYMACRO is the ability to make online backups of your documents. Simply choose the right folder on the database and click on the "Backup" button. You don't need to perform any other action because the backup process is taken

care of by the application itself. **How to Install and Use KEYMACRO:** All you need to do is double-click on the KEYMACRO icon and follow the instructions. The installation process will take a few minutes, and you'll need to allow the software to run in the background so you can exit the setup process whenever you want to continue working. In order to start working with the program, launch it by simply clicking on the icon that's next to the clock. If you need to access the settings, you'll find the 2edc1e01e8
