In the section on “Feature Updates,” I detailed my thoughts on camera RAW. It’s been a frequent critique that Adobe doesn’t care much about the end-user’s experience. Well, I’m glad to report that Lightroom 5.2 officially supports RAW conversion from almost all of the major camera manufacturers, including the notable omission of Fujifilm’s X-Trans hybrid sensor and thus the inability to work with the RAW files that come from it, which will likely be fixed in Lightroom 5.3. In fact, this is one of the most important additions Lightroom 5.2 brings to the table. As a professional photographer, I’m happy to see that camera RAW support is moving forward. Some may say that they don’t care what the camera RAW files look like, but having access to them allows users to finally choose the right format. As it stands now, there is basically no choice. I’m especially pleased to note that this feature is actually working correctly.

In the section on “Feature Updates,” I have stated in no uncertain terms that I am not a fan of the new, confusing way of accessing the 100% view. In fact, I have found it to be somewhat slower if the camera is set to 100%. The traditional 100% view still remains the same, but to change it, you have to click a button in an entirely different location, and the context menu deselects itself. It’s actually a step backwards in contrast to the previous action. I’ve been using Photoshop’s interface for years. This is a completely unnecessary change that makes the interface less useful and more confusing. I grew accustomed to the old, intuitive interface. By default, the 100% view had to be accessed by clicking the > icon. Lightroom 5 has removed that in-built functionality. In addition to the unintuitive location of the > icon, the context menu also deselects itself if a text selection is made. The > icon still works in that context, but is even slower to respond. In fact, it takes multiple clicks and multiple deselections in order to perform that action properly. It is clear that Adobe is trying to provide a more streamlined experience for the user, but they have only confused it further.
