As you know, we're always a bit skeptical about Adobe's rapid and frequent update programs, but I think it's fair to regard this as a good one. The first and most obvious release is already here—version 5.2, which starts out with a redesigned Workshop. I haven't had a chance to explore the changes, but they include a new module design, a single View and Edit module, several new Workshops, a new search panel/organizer. With the new updates, you can finally choose to activate the Crop tool and release the crop clip automatically. It's a small thing, but it saves a lot of time. Being a long-time Elements user, I'm excited to see that I'll finally be able to fix my dull images with a host of new tools. Adobe Sensei AI is supposed to make this one-click. Adobe has been working this feature for a while, but now it's finally making a consumer-focused release for all of us. I'm really looking forward to this update. There's even a new editor tool that allows you to remove objects from your image before going into the Raw Converter - perfect for the homeowner who accidentally removed a wall of the house or a fence. I can't wait to see just how much impact this upgrade will have on my workflow. Scribble gives you the ability to clutter out an image in a very convenient way. You can have texts and graphics of different sizes, rotate them, and apply effects to them. Just tap on the item you want to add and select either a photo or a text sticker. Follow the onscreen prompts to add the sticker/photo.

Use the Threshold tool to add or eliminate colors and tones. This tool is used for mixing colors. For example, a green object in a blue background. When used in conjunction with the blending modes, the Threshold tool lets you create really cool and seamless effects. Use the Blur tool to soften or add focus to an object. The best thing about this tool is that you can create all kinds of blurred effects,

such as a blurred background, blurred faces, and even blurred plaids. Let's say you're using your photos as invitations for a special party and want to make sure the invite looks good. If you use the Fill tool and turn the fill color all the way down to white, the fill is barely visible and the invite won't look like an invite at all. If you apply the fill to an area that contains a lighter texture, you might get more contrast and make the image look more vibrant. Adding a slight blur to your image with the Blur tool will also help the invite become more visually appealing. If you have never used a tablet find a friend who has one or purchase a new one! The interface is a pleasure to work on and you touch as many as 10 different buttons depending on how you prefer to use the program. There is lots of space to work upon the screen, not as small as a phone screen with small handwriting but not as large as a computer screen. Also, this is an editing program so it can be more than just a scanner. With Lightroom, you can create album pages, have them with a grid with date, title, location, city etc much as you would in a Small Press or Book Aparte Album. e3d0a04c9c
