JENNYSON: Can you give us an idea of how long it takes to add new features into Lightroom? I know that Adobe are a very dedicated company and I hope they don't add features only to see them not used. It would be disappointing for users like me who like to see everything that is possible. **GEBSER‹:** There is no concrete time frame for new features in any first party products. When we design a feature, it depends on a range of things - how good the feature is, how long it takes to implement it, and how tightly integrated it is. Sometimes with new features we have to mockup and test the workflow until it's pretty much ready. Adobe's Creative Cloud Photography package is well priced, is pretty much straightforward to use and has a lot of features. The one downside, however, is that it does not support all Adobe Camera Raw features. Lightroom is the core of the package and also has the most important features - such as RAW processing, editing and managing large collections. I have been using Lightroom 5 with my iPhone 6 for almost four weeks, and have become very fond of it. One feature that I have not mentioned here is that Adobe has completely redesigned the Color panel. Here it is: Current Photoshop CC features are largely unchanged from CS7 except for the addition of more customisable View Options and the launch of Adobe's intelligent guides, which automatically crop images into more standard shapes and sizes. In the macho world of the graphic design industry, there are those who argue that the art of cropping images is dead. So naturally, CS7 has introduced a IQ Crops tool, enabling the cropping of an image to be done in one click, and with greater accuracy.
